ABSTRACT OF THE DISCLOSURE

 A table saw capable of adjusting its cutting angle having a base, a suspension arm pivotally mounted on said base and provided at two distal ends thereof with a mounting seat respectively, two adjustment members detachably fastened to the mounting seat respectively, four support rods connected to the two adjustment members respectively, two saw racks sleeved onto the four support rods respectively, and an arch saw movably installed in the saw racks for reciprocating motion between the saw racks within a distance. The mounting seats each have a mounting hole and a first positioning unit below the mounting hole. The adjustment members each have a second positioning unit adapted for coupling to the first positioning unit for enabling said adjustment member to be secured to the mounting seat in a determined position, and a through hole above the second positioning unit, through which a screw bolt is inserted and fastened to the mounting hole of the corresponding mounting seat.
